**Tutoring by
Robin Winogrand
Landscape Architect
& Urban Design
Studio Vulkan
Landschaftsarchitektur**

Large infrastructures are being planned or built at an increasingly rapid pace, but their impact is already evident long before they reach completion.

Excavation of tunnels and construction of major road axes produce a huge quantity of waste material. Those in charge of construction works have a difficult decision to make, namely where to deposit and how to dispose of construction waste and debris.

Local institutions have conceived a quite ambitious project that will be analyzed and debated during our Summer School: the creation of islets near the Vedeggio river mouth. What will be the impact of this project? How will it affect the daily life of the local population? What, if any, are the possible alternatives?

The summer school this year offers an opportunity to contribute to the development of such new interventions, challenging participants to confront themselves with the different topographies, landscapes, and infrastructural elements existing in a real setting.

The program aims to investigate the real, to understand and integrate the many facets and realities of territory transformation into a comprehensive coherent approach.

Cost 600 CHF
(workshop, accommodation + enrolment fee)
participants will be awarded by 3 ECTS credits
+ 1 credit for an extra documentation

i2a – istituto internazionale di architettura
Villa Saroli, Viale Stefano Franscini 9, 6900 Lugano
